Dave and Julie,

Here is the information I received from Dave Amlin of All American Metal Finishing. He has been locked out of the building by the property owner and will not be allowed to manage any of the liquid wastes that are currently on-site. All insurance policies have lapsed and he wanted to let us know he warned the bank.

From what I gathered all processing activity was terminated in December of 2008. The fluid handling pump is broken and on-site treatment of remaining waste streams would not be feasible until repairs are completed and

would also take a very long time. After a lengthy discussion with Dave, it appears that the liquids currently on-site are not of much value to other plating shops in the area. Production Plating (Pat Keating) came down to the facility last week and indicated that he didn't want the zinc plating solution.

The approximate volume of liquids on-site according to Dave are as follows:

3,000 gallons Zinc Plating Bath

3,600 gallons Metal Cleaners (alkaline)

2,700 gallons Pickling Bath (acidic)

1,800 gallons Brighteners (contain Chrome III)

2,000 gallons in the Waste Treatment Settling Tanks

800 gallons in the Evaporator Unit

19,250 gallons of dirty rinse water.

(The facility used double counter-current rinse on all process tanks. Approximately 11 process tanks would mean there are 22 rinse tanks on-site at 875 gallons per tank)

Total Liquid On-site ~33,150 gallons.

Rob

Subject: Property Insurance

Brian,

I talked with by Insurance agent concerning the property insurance on the equipment in the building. We need to know what to do with the policy that is about to expire. The agents name is Rod Saalfeld with Bell Anderson Insurance in Kent, Wash. His direct line is 253-458-2206.

Rod can also give you a heads up on the flood danger that is threatening property in our area this winter due to a Flood control dam that is damaged and will not be allowed to hold back much water this winter. The concern is the fluid in the tanks and the need to get it removed before the winter storms hit us.

Thanks for your help.
